

**SIZE OPTIONS**

Small – 4XL

**KEY TECHNOLOGY**

A half-zip lightweight windstopper jacket designed to keep in warmth in windy conditions while also being breathable. This is achieved thanks to a microporous membrane.

**WILL SUIT**

● Anyone who plays during the autumn and winter months

**GM VERDICT**

⊕ A superb garment for cold conditions when there is little rain. It keeps the heat in and there is no interference with the swing.  
 ⊖ Some will find it hard to justify the cost for a non-waterproof.

By Paul O'Hagan

**PGA PRO VERDICT**

I have used this for some time and have been very impressed. The lightweight, stylish design does not restrict movement and has a fitted feel. It will keep you warm on chilly days.

# GALVIN GREEN

## BATES WINDSTOPPER

# £149

**LOFT OPTIONS**

12°, 14°

**KEY TECHNOLOGY**

A traditional headshape with corner weighting and an offset hosel. This is designed to offer added forgiveness, particularly for those who suffer from a slice.

**WILL SUIT**

● Golfers with a severe slice

**GM VERDICT**

⊕ There aren't many offset drivers around, but there is still a market for those who want a quick fix for a severe slice. The shaft is very consistent.  
 ⊖ An offset driver only provides a quick fix for a slice without improving swing faults.

**PGA PRO VERDICT**

The loft seemed stronger than 12 degrees, but it produced an excellent high flight. Its offset design was very forgiving and helped consistency. The Voodoo shaft was suitably stable.
